

MARS2 2026 Multimodal Reasoning Challenge

Competition Integrity and Data Compliance Agreement

To maintain a fair, impartial, and transparent competition environment, participants must read and agree to the terms of this agreement prior to submission.

I. Account and Identity Authenticity Each participant or team is restricted to a single official account; artificially boosting rankings or acquiring additional submission quotas through forged identities or multiple accounts is strictly prohibited. The system registration information must be absolutely identical to the display name on the leaderboard, as this name serves as the sole credential for subsequent award distribution and verification. The use of misleading, offensive, or infringing names is strictly forbidden.

II. Academic Integrity and Anti-Cheating Prediction results must be automatically generated by an algorithm or model; manual modification, correction, or completion of test set results is strictly prohibited. It is strictly forbidden to directly or indirectly use the private test set to train models (including but not limited to: unsupervised pre-training, fine-tuning with generated pseudo-labels, or constructing offline retrieval libraries to piece together answers). Participants must hold the legal right to use their code and models, comply with open-source licenses, and firmly reject plagiarism and academic fraud.

III. Score Submission and Visibility Rules

- **Regular Phase (Public by default):** Submissions must be set to "Public"; those who maliciously set their submissions to "Private" to conceal their capabilities will be removed from the leaderboard.
- **Sprint Phase (Privacy protection):** Setting submissions to "Private" is permitted during the final 7 days of the competition to protect core algorithms and prevent copycat submission flooding at the end of the event.
- **Final Leaderboard Standings:** Regardless of public or private status, final standings will be determined by the highest score on the test set or the designated optimal model. Top-ranked finalist teams must submit their code and technical reports for replication and review by the organizing committee.

IV. Data Use and Sharing License Regarding data acquisition and usage, participating teams must strictly adhere to the "MARS2 2026 Challenge Data Use and Sharing License Agreement" displayed on the platform. The official datasets provided are authorized exclusively for academic research related to this competition. Using them for commercial profit-making activities (including the training of commercial closed-source models) is strictly prohibited, and secondary distribution, public disclosure, or provision of the data to non-participating third parties in any form (such as cloud drive sharing or code repositories) is strictly forbidden.

V. Breach of Contract and Penalties Should anyone be found violating the aforementioned terms, the organizer reserves the right to take the following measures without prior notice:

Immediately invalidate all historically submitted scores. In severe cases (such as egregious falsification or server attacks), academic misconduct will be reported to the participant's affiliated school, institution, or organization.

VI. Supplementary Provisions This agreement becomes effective from the date of clicking "Agree and Register." The competition organizing committee reserves the right of final interpretation and the right to amend the rules via announcements when necessary.
